STATINTL

Dear 

Reference b) requests that  assess the GFE terminal as to its ability to meet the  system specification. It further indicated that the Government feels that the terminal meets the requirements of the  specification.

There have been a number of meetings on this subject and a great deal of data exchanged. We were under the impression that the system design was incorporating the terminal and that problems were being worked out as identified and quantified.

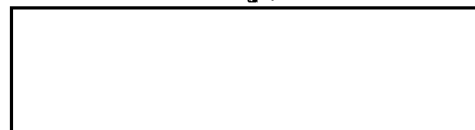

Reference a) in paragraph 1, page 1 indicates an "...apparent incompatibility between the GFE terminal firmware and the system design."

In the absence of a response to reference b), Change Order 10, or specific problems to address, we are left in a quandary on this subject.

I expect you to outline the specific incompatibilities which you perceive so that we may address them at once. I expect an immediate response rather than awaiting Change Order 10.

Sincerely,

STATINTL

SAFE COTR
